THESIS FORMAT GUIDE

PHD IN FINANCE

EDHEC BUSINESS SCHOOL

October 2011

Introduction

This guide is intended to help students in preparing their PhD dissertations. It will ensure that you meet the formatting requirements set for dissertations of the PhD in Finance at EDHEC Business School. Before the thesis is accepted, your dissertation will be evaluated for adhering to the proper format. If your dissertation fails to meet the format requirements, you will need to do the necessary corrections before graduating.

Organization of the Manuscript

The typical dissertation for the PhD in Finance will be made up of two papers that will make up the body of the dissertation. Each paper will include References and Appendices. The papers will be preceded by the front matter of the dissertation. The order of sections should be as follows:

1. Title page (see sample page in Appendix)
2. Copyright page (see sample page in Appendix)
3. Approval Form (see sample page in Appendix)
4. Abstract
5. Table of Contents
6. Acknowledgments
7. List of figures and of tables
8. Papers with References and Appendices

The *Abstract* should be about 500 words in length and cover the contents of the two papers. It should explain the research question addressed and provide a motivation for it, the method used to answer the question, the main findings and the conclusions reached.

The *Table of contents* should list all sections and subsections including the front matter, with the corresponding page numbers.

The *Acknowledgments* give the students the possibility to acknowledge the assistance and advice received from faculty members or others while writing the dissertation, as well as the financial support received for the research if applicable.

The *List of figures and tables* should contain the table or figure number, name and page number.

Each *paper* should start with a page containing the title of the paper, the names and affiliations of the authors, the acknowledgments pertaining to the paper, as well as keywords. Textual notes that provide supplementary information or additional explanations must be placed at the bottom of the page as a footnote. A list of references or bibliography must be included at the end of the paper, followed by Appendices if applicable. All tables are placed in consecutive order after the Appendices, followed by the figures.

Manuscript Preparation

The appearance of your dissertation is very important since it will be read by students and scholars in the future. Please follow the simple rules and suggestions below to ensure your document has a quality look.

Paper

Use 8½" x 11" paper of at least 20-lb weight.

Printing

- Text: high-contrast laser printed or photocopied on white paper
- Font: Times New Roman, 12 point
- Single-sided printing only

Margins

- Top, right-hand, and bottom margins: 1 inch
- Left-hand margin: 1½ inches (to accommodate the binding)

Spacing

- Spacing throughout body of text: double spacing
- Spacing for footnotes and bibliographies: single spacing within each entry but double spacing between each entry
- Spacing for table of contents, list of tables, list of figures, and lengthy tables: single spacing may be used
- Include one space after sentence punctuation
- No pages end with headings and subheadings
- No paragraphs end with one line at the top of a page

Pagination

- All pages of the dissertation are counted in the numbering, even if the number is not printed on the page
- The front matter is numbered with small Roman numerals (i, ii, iii, etc.)
- The body is numbered with Arabic numerals (1, 2, 3, etc.)
- The numeral pagination is placed one half inch up from the bottom of the page
- Page numbers are placed in the lower right hand corner

Binding

Candidates should submit 2 copies of their dissertations, one of which is hard-bound.

The hard-bound copy must

- Have its pages sewn and glued
- Be bound using a professional quality library buckram
- be lettered in gold up the spine with Title, Degree, Year, and Surname, with font size 16

If the thesis has to be bound in two volumes, the spine should indicate this clearly, eg Vol. 1 and Vol. 2.

These are to be submitted after the defence, with any required corrections completed. The School will not confirm the result of the examination to third parties until it has received one final hard-bound and one final soft-bound copy and the examiners have confirmed that any amendments to the thesis required by them have been made.

The binding arrangements must be done by the students and at their own expense. We suggest to consult the site of an international specialist http://www.mythesis.co.uk but the students can choose their own company as long as they use the recommended type of binding.

Tables

Tables should be placed after the references on single pages and consecutively numbered. Headings of tables should be placed at the top of the table. Apart from the title, the heading should include enough information on how the contents of the table have been generated so that it is self-contained. The reader should be able to read the table without referring to the body of the text. See sample table in the Appendix (following the model of a typical table in the Journal of Finance).

Figures

Figures are placed after the tables on single pages and consecutively numbered. Captions of figures should be placed at the bottom of the page. See sample figure in the Appendix (following the model of a typical figure in the Journal of Finance).

Bibliography

See a sample bibliography in the Appendix.

APPENDIX

TITLE OF THE DISSERTATION

by

YOUR NAME

A dissertation submitted in partial fulfillment
Of the requirements for the degree of

Doctor of Philosophy
[EDHEC Business School]

Table III

Vector Autoregression (VAR) Model of Attention Measures

We compare four weekly measures of attention using vector autoregressions (VARs). The variables are defined in Table I. We run the VAR for each stock with at least 2 years of weekly data. We include both a constant and a time trend in the VAR. The VAR coefficients are then averaged across stocks and the associated p-values are reported below. These p-values are computed using a block bootstrap procedure under the null hypothesis that all VAR coefficients are zero. We start with the panel of residuals from the VAR and construct 10,000 bootstrapped panels. In the time-series dimension, we block-bootstrap with replacement using a block length of 23 weeks to preserve autocorrelation structure in the error terms. In the cross-sectional dimension, we also bootstrap with replacement. We repeat the VAR estimation in each bootstrapped panel, which allows us to build up the empirical distributions of the VAR coefficients. *, **, and *** represent significance at the 10%, 5%, and 1% level, respectively.

	Lagged 1 Week				
	log(SVI)	log(turnover)	Absolute Abn Ret	log(1 + Chunky News)	R^2
log(SVI)	0.5646***	−0.0022***	0.0489***	−0.0027***	56.47%
